BUILDING GREEN PROJECTS

Building Green Projects (BGP), is a company that approaches construction projects from a service perspective. The company has quickly earned a reputation for not only being hardworking and honest, but also primarily a personable company. As licensed building contractors, (BGP) is under the direction of Javier Rivera and Daniel Medellin. Both Javier, a builder with 18 years of natural stoneworking experience, and Daniel, a hospitality service professional, lead the direction of the company and our skilled staff. This winning combination has allowed BGP the pleasure of working with many reputable and satisfied clients; Rolls Royce, Rector Porche-Audi in Burlingame, Peet's Coffee, The California Academy of Sciences, The City of San Francisco, Joie deVivre Hospitality in San Francisco, and the Lawrence Berkeley National Laboratory.

We feel that the success of our company is due to our unparalleled customer service from start to finish. At BGP, we look at building relationships as we would build buildings. We realize that relationships as well as buildings need a strong foundation to survive, this is why we pay special attention to our client's design needs and budgetary demands in the planning process and throughout the entire project.

MIXED GREENS RESTAURANT

Our process begins with dedicated Project Manager, who will work with you to find the best design solution. Next, BGP will provide an honest approach to estimating a project's cost, we will do our best to make our clients aware of every variable we can imagine, rather than adding "unforeseen costs" after the project has started. This transparency and straightforwardness in project costs often saves time and money in the long run and is greatly appreciated by our clients. Our professional team of highly skilled tradesmen will show up on time, and masterfully complete your project and leave the site clean and in order.

- Polished Concrete Slabs
- Chemical/Abrasion Resistant Floors
- Seamless Floor Coatings

BUILDING GREEN PROJECTS

At BGP we pride ourselves in our ability to place both the customer and the environment first. We focus on sustainable building practices. BGP strongly agrees with the concept of “Cradle to Cradle Design”. CCD is based on a sound environmental precept that when a society creates toxic materials, these materials eventually wind up in the environment and make their way into our bodies (i.e. “waste is food”).

“The cradle-to-cradle idea seeks to get away from the idea that we can live in a throwaway society forever,.....” described by Jerry Yudelson, author of Green Building A to Z. With our concrete polishing process and unequalled concrete floor preparation processes in place, going “green” was a natural progression, as this process has many health and sustainability benefits. BGP has found other areas in our work practices to be healthier and more environmentally friendly.

Although the focus of BGP was launched with the specialization of concrete flooring we have expanded and now have the ability to work with you on any construction project that you may have. Determining your long term goals is important to our business and yours.

From start to finish you will know you have made the right choice with Building Green Projects (BGP).
